## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Ogino et al US 2005/0166680).

Regarding claims 1-9 Ogino et al teaches a sensor unit 12 in which a piezoelectric layer 22 containing a piezoelectric ceramic [0071] material is sandwiched by a plurality of electrodes 20 21 a covering layer 23 which covers the sensor unit 12; and heat insulating means 14 made from an expandable synthetic resin [0064] which covers the circumference of the covering layer.

Regarding claim 2 Ogino et al teaches the sensor unit is a cable-like sensor [0126][0136] comprising a primary electrode which makes up a core unit [0136][0126] , a piezoelectric layer 22 which covers the primary electrode 20 and a secondary electrode 21 which covers the outside of the piezoelectric layer [0136][0126].

Regarding claim 3 Ogino et al teaches the sensor unit is a sheet-like [0074]sensor which is formed such that sandwiched by a primary electrode a piezoelectric layer 22 is electrode and a secondary [0074]

Regarding claim 4 Ogino et al teaches the heat insulating means is an elastic material having a hollow portion 16 formed therein [0064].

Regarding claim 5 Ogino et al teaches the heat insulating means is made to double as the covering layer [0067].

Regarding claim 6 Ogino et al teaches the heat insulating means comprises a mounting portion for mounting the pressure sensor on an equipment base material (fig. 2).

Regarding claim 7 Ogino et al teaches molding a heat insulating means on the periphery of the sensor unit through extrusion molding [0020].

Regarding claim 8 and 9 Ogino et al teaches opening and closing equipment (fig. 1) and determination means for determining on the contact of a foreign matter with the pressure sensor based on an output signal of the pressure (abstract).
